

UNDERSTANDING Your Storm Water Fee

The Storm Water Fee is based on a property's impervious surface area such as rooftops, driveways and private walkways. The more impervious surfaces, the more stormwater runoff flows from the property into the storm drainage system.

Our community benefits when we reduce flood risks, drain runoff from storms safely to streams and ensure runoff is as clean as possible.

Effective July 1, 2018, fees for the City of Charlotte increased less than \$0.75 a month for most single-family properties. Unincorporated Mecklenburg County and surrounding towns did not see a fee increase this year.
